# B.Tech. Programme in **COMPUTER SCIENCE AND ENGINEERING**

**2019 Regulations**

**COURSE STRUCTURE AND SYLLABI OF I, II SEMESTERS**

**COLLEGE OF ENGINEERING**  
(AUTONOMOUS)

**GAYATRI VIDYA PARISHAD COLLEGE OF ENGINEERING**  
(AUTONOMOUS)

MADHURAWADA, VISAKHAPATNAM

**AFFILIATED TO JNTU- KAKINADA**

---

---

**Vision**

***To evolve into and sustain as a Centre of Excellence in Technological Education and Research with a holistic approach.***

**Mission**

***To produce high quality engineering graduates with the requisite theoretical and practical knowledge and social awareness to be able to contribute effectively to the progress of the society through their chosen field of endeavor.***

***To undertake Research & Development, and extension activities in the fields of Science and Engineering in areas of relevance for immediate application as well as for strengthening or establishing fundamental knowledge.***

---

## CALCULUS AND LINEAR ALGEBRA

**Course Code: 19BM1101**

L	T	P	C
3	1	0	4

### Course Outcomes:

At the end of the course, the student will be able to

- CO1:** test the convergence of an infinite series and express a function in terms of power series.
- CO2:** apply the techniques of multivariable differential calculus to determine extrema and series expansions of a function of several variables.
- CO3:** extend the concept of integration to higher dimensions and use it to solve problems in engineering.
- CO4:** solve a linear system of equations analytically and compute eigenvalues and eigenvectors of a square matrix.
- CO5:** diagonalize a matrix and identify the nature of a quadratic form.

### UNIT- I: Sequences, Series and Mean value theorems

**10 Lectures**

Sequence, infinite series, tests for convergence: comparison test, ratio test, root test.

Rolle's theorem, Lagrange's and Cauchy's mean value theorem (without proof); expansions of functions: Taylor's and Maclaurin's series (without proof), (Sections 4.3, 4.4, 9.1-9.6, 9.8, 9.9, 9.11 of the textbook)

### Learning Outcomes:

At the end of this unit, the student will be able to

1. apply mean value theorems to find local extrema of a continuous function (L3)
2. discuss Taylor's and Maclaurin's series expansion of a function (L2)
3. determine the convergence of an infinite series (L3)

### UNIT- II: Partial differentiation

**10 Lectures**

Introduction to partial derivatives, total derivatives, change of variables, jacobians, Taylor's theorem for functions of two variables, maxima and minima of functions of two variables, Lagrange's method of undetermined multipliers.

(Sections 5.5, 5.6, 5.7, 5.9, 5.11, 5.12 of the textbook)

**Learning Outcomes:**

At the end of this unit, the student will be able to

1. calculate partial derivatives and use them to analyze a function (L3)
2. discuss the maxima and minima of a function of several variables (L2)
3. examine the dependency of functions using jacobian (L3)

**UNIT- III: Multiple integrals****10 Lectures**

Double integrals, change of order of integration, double integration in polar coordinates, areas enclosed by plane curves, triple integrals and change of variables.

(Sections 7.1 - 7.5, 7.7 of the textbook)

**Learning Outcomes:**

At the end of this unit, the student will be able to

1. discuss multiple integral of a function of several variables (L2)
2. determine areas and volumes using multiple integrals (L3)
3. describe the concept of change of order of integration in double integrals (L2)

**UNIT- IV: Matrix operations and solving systems of linear equations****10 Lectures**

Rank of a matrix (echelon form and normal form), consistency of linear system of equations, eigen values and eigen vectors of a matrix, properties of eigen values.

(Sections 2.7, 2.10, 2.13, 2.14 of the textbook)

**Learning Outcomes:**

At the end of this unit, the student will be able to

1. express the rank of a matrix using elementary operations (L2)
2. discuss the consistency of systems of linear equations (L2)
3. determine eigen values and eigen vectors of a matrix (L3)

**UNIT- V: Cayley-Hamilton theorem and Quadratic forms****10 Lectures**

Cayley-Hamilton theorem (without proof), finding inverse and power of a matrix by Cayley-Hamilton theorem, reduction to diagonal form, reduction of quadratic form to canonical form, nature of the quadratic form.

(Sections 2.15- 2.18 of the textbook)

**Learning Outcomes:**

At the end of this unit, the student will be able to

1. determine the inverse and power of a matrix using Cayley-Hamilton theorem (L3)
2. model an orthogonal matrix to obtain the diagonal form (L3)
3. discuss the nature of a quadratic form (L2)

**Textbook:**

B. S. Grewal, “*Higher Engineering Mathematics*”, 44<sup>th</sup> edition, Khanna Publishers, 2017.

**References:**

1. Erwin Kreyszig, “*Advanced Engineering Mathematics*”, 10<sup>th</sup> edition, John Wiley & Sons, 2011.
2. Greenberg M D, “*Advanced Engineering Mathematics*”, 2<sup>nd</sup> edition, Pearson Education, Singapore, Indian Print, 2003.
3. Peter V. O’Neil, “*Advanced Engineering Mathematics*”, 7<sup>th</sup> edition, Cengage Learning, 2011.

## ENGINEERING CHEMISTRY

**Course Code: 19BC1101**

L	T	P	C
3	0	0	3

**Course outcomes:** At the end of the Course the student shall be able to:

**CO1:** recall the principles; explain the working and design of energy storage devices.

**CO2:** compare different types of cells and explain the merits of fuel cells.

**CO3:** list various sources of renewable energy and applications of solar energy

**CO4:** classify the polymers and can apply to specific purposes

**CO5:** distinguish between nano clusters & nano wires, Molecular Machines & Switches

### UNIT- I

**10 Lectures**

#### ELECTROCHEMICAL ENERGY SYSTEMS- I

Introduction-Electrode potential, origin and measurement, Nernst Equation for a single electrode; Types of Reference Electrodes -Hydrogen and Calomel electrode; Electrochemical Cell, Galvanic Cell vs Electrolytic Cell, Electrochemical conventions, EMF of a cell; Concentration Cells; Types of Ion Selective Electrodes - glass membrane electrode-pH measurement, polymer membrane electrodes (nafion).

#### Learning outcomes:

After the completion of the Unit, the student will be able to

1. illustrate the construction of concentration cells. (L2)
2. explain the significance of electrode potentials.(L2)
3. compare different types of cells and batteries. (L2)
4. classify ion selective electrodes. (L2)

### UNIT-II

**10 Lectures**

#### ELECTROCHEMICAL ENERGY SYSTEMS - II

Batteries- primary cells- Dry/Leclanche cell, Alkaline cells (Zn-HgO cell, Zn-AgO cell) Secondary cells– Lead acid battery, Ni-Cd battery, Lithium-ion battery, metal air battery; Fuel cells- Introduction, merits of fuel cells, hydrogen - oxygen fuel cell- Alkaline fuel cell, phosphoric acid fuel cell, propane and oxygen fuel cell .

#### Learning outcomes:

After the completion of the Unit, the student will be able to

1. classify different types of batteries. (L2)
2. explain the concepts involved in the construction of lithium cells. (L2)
3. compare the merits of different fuel cells. (L2)
4. apply redox principles for construction of batteries and fuel cells. (L3)

**UNIT- III****10 Lectures****ENERGY SOURCES AND APPLICATIONS**

Introduction- fossil and renewable energy; Sources of renewable energy, Solar energy- Silicon Photovoltaic cells - manufacture by chemical vapour deposition method and applications; Band theory of solids, Doping of Silicon- p and n type semiconductors; p-n junction.

**Learning outcomes**

After the completion of the Unit, the student will be able to

1. list different renewable sources of energy. (L1)
2. explain how photovoltaic cells convert light into energy. (L2)
3. compare p and n type semiconductors. (L2)
4. illustrate the construction of PV cell. (L2)

**UNIT-IV****10 Lectures****POLYMER CHEMISTRY**

Introduction to polymers - functionality of monomers, chain growth and step growth polymerization, coordination polymerization, copolymerization (stereo specific polymerization).

**Plastics** - Thermoplastic and Thermosetting, preparation, properties and applications of – Bakelite, urea-formaldehyde polymer, Nylon-66.

**Elastomers**-preparation, properties and applications of Buna-S, Buna-N.

**Conducting polymers** – Preparation, properties and applications of polyacetylene, polyaniline, polypyrroles.

**Learning Outcomes:**

At the end of this Unit, the students will be able to

1. explain different types of polymers and their applications (L2)
2. explain the preparation, properties and applications of Bakelite, Nylon-66, and carbon fibres (L2)
3. describe the mechanism of conduction in conducting polymers (L2)
4. discuss Buna-S and Buna-N elastomers and their applications (L2)

**Unit – V****10 Lectures****NANOMATERIALS AND MOLECULAR MACHINES**

**Nanomaterials:** Introduction to nanomaterials - nanoparticles, nanoclusters, fullerenes, carbon nanotubes (CNT) and nanowires; Synthesis of nanomaterials - Sol-gel method, Reverse micellar method; Variation of colour of gold nanoparticles – quantum confinement – qualitative picture based on band diagram; Applications of nanomaterials in wastewater treatment, lubricants and engines.

**Molecular machines**-Introduction, types.

**Learning outcomes:**

After the completion of the Unit, the students will be able to

1. classify nanomaterials. (L2)
2. explain the synthesis and characterization methods of nano materials. (L2)
3. apply the concepts of artificial molecular machines (L3)
4. use nanomaterials in wastewater treatment other applications (L3)

**Text Books**

1. P.C. Jain and M. Jain, *Engineering Chemistry*, 15<sup>th</sup> edition, Dhanapat Rai & Sons, Delhi , 2014.
2. B.S Murthy and P. Shankar, *A Text Book of NanoScience and NanoTechnology*, University Press , 2013.

**Reference Books**

1. O.G.Palanna, *Engineering Chemistry*, Tata McGraw Hill Education Pvt Ltd, 2009.
2. Sashi Chawla, *A Textbook of Engineering Chemistry*, Dhanapath Rai and sons, 2003.
3. S.S. Dara, *A Textbook of Engineering Chemistry*, S.Chand & Co , 2010

# BASIC ELECTRICAL AND ELECTRONICS ENGINEERING

**Course Code: 19EE11D2**

**L T P C**

**3 0 0 3**

**Course Outcomes:** At the end of the Course the student shall be able to

**CO1:** Analyze the behavior of an electrical circuit.

**CO2:** Measure the performance quantities such as losses, efficiency of DC machines

**CO3:** Measure the performance quantities such as losses, efficiency of AC machines

**CO4:** Understand the importance and application of p-n junction diode

**CO5:** Evaluate the configurations and applications of Op-Amps.

## UNIT-I

**10 Lectures**

### BASIC LAWS AND THEOREMS

Ohm's law, Kirchhoff's Laws, series and parallel circuits, source transformations, delta-wye conversion. Mesh analysis, nodal analysis. Linearity and superposition theorem, Thevenin's theorem, Norton's theorem, maximum power transfer theorem with basic problems.

**Learning outcomes:** At the end of this unit, the student will be able to

1. apply Ohms and Kirchhoff's Laws (L3)
2. analyze theorems such as Linearity & superposition theorem, Thevenin's & Norton's theorem and maximum power transfer theorem. (L4)
3. determine the current, voltage and power in a given electrical circuit (L3)

## UNIT-II

**10 Lectures**

### DC MACHINES

Constructional features induced EMF and torque expressions with simple problems, different types of excitation, performance characteristics of different types of dc machines, 3-point starter, losses and efficiency, efficiency by direct loading with basic problems

**Learning Outcomes:** At the end of this unit, the student will be able to

1. understand the constructional features of DC machines. (L2)
2. analyze EMF, torque and performance characteristics of DC machines. (L4)
3. estimate losses and efficiency of electrical machines. (L3)

**UNIT-III****10 Lectures****AC MACHINES**

**Transformers:** Constructional details, EMF equation, voltage regulation, losses and efficiency, open/short- circuit tests and determination of efficiency with basic problems.

Three Phase Induction Motors: Construction, working principle, Torque and Torque-Slip characteristics, efficiency with basic problems.

Synchronous Motor: Construction, EMF Equation, working principle.

**Learning Outcomes:** At the end of this unit, the student will be able to

1. outline the constructional details and principle of transformers. (L2)
2. analyze the efficiency and voltage regulation of a transformer. (L4)
3. explain the principle of three phase induction motor and synchronous motor. (L2)

**UNIT-IV****10 Lectures****SEMICONDUCTOR DEVICES**

p-n Junction diode - Basic operating principle, current-voltage characteristics, rectifier circuits (half-wave, full-wave, rectifier with filter capacitor), Zener diode as Voltage Regulator; Metal oxide semiconductor field effect transistors (MOSFET): Operation of NMOS and PMOS FETs, MOSFET as an amplifier and switch

**Learning Outcomes:** At the end of this unit, the student will be able to

1. analyze the device structure, operation and characteristics of a p-n junction diode. (L4)
2. apply p-n diodes for various applications. (L3)
3. explain the construction, operation and applications of MOSFETs (L2)

**UNIT-V****10 Lectures****OPERATIONAL AMPLIFIERS**

The Ideal Op Amp, The Inverting Configuration, The closed loop gain, Effect of Finite open-loop gain, The Non Inverting Configuration, The closed loop gain, Characteristics of Non Inverting Configuration, Effect of finite open loop gain, the voltage follower, Difference amplifiers, A Single Op-amp difference amplifier.

**Learning Outcomes:** At the end of this unit, the student will be able to

1. illustrate the operation of Op Amps. (L2)
2. explain different modes of operation of Op Amps. (L2)
3. make use of Op Amp in different applications. (L2)

**TEXT BOOKS:**

1. V. K. Mehta, Rohit Mehta, *Principle of electrical Engineering and electronics*, 3<sup>rd</sup> edition, S. Chand Publishing, New Delhi, 2016.(Unit-1, 2 and 3)
2. Adel S. Sedra and Kenneth C. Smith, *Microelectronic Circuits*, 6<sup>th</sup> edition, Oxford University Press, 2014. (Unit-4 & 5)

**REFERENCES:**

## COMMUNICATIVE ENGLISH

**Course Code: 19HE1101**

<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>

**Course Outcomes:** At the end of the course, the student will be able to

**CO1:** acquire skills of understanding and inferred meaning of words

**CO2:** transfer information from one form to another in texts and authentic materials

**CO3:** write paragraphs and summarized with clarity, cohesiveness and precision

**CO4:** produce well organized notes, essays, letters, emails & précis.

**CO5:** formulate sentences using proper grammatical structures and correct word forms

### UNIT-I

**08 Lectures**

#### Lessons:

1. **What's your job** – from Cambridge Objective PET (Unit – 3)
2. **Wheels and wings** – from Cambridge Objective PET (Unit –5)

**Reading:** Skimming to get the main idea of a text; scanning to look for specific pieces of information.

**Reading for Writing:** Beginnings and endings of paragraphs - introducing the topic, summarizing the main idea and/or providing a transition to the next paragraph.

**Grammar:** Nouns - countable and uncountable, pronouns, verb-tenses - present simple, present continuous, state verbs; prepositions of time, basic sentence structures; simple question form - wh-questions.

**Vocabulary:** Technical vocabulary from across technical branches (20) GRE Vocabulary (20) (Antonyms and Synonyms, Word applications) Verbal reasoning and sequencing of words, prefixes & suffixes.

**Learning Outcomes:** At the end of the module, the student will be able to

1. employ suitable strategies for skimming & scanning to get the general idea of a text and specific information (L3)
2. recognize paragraph structure with beginnings/endings (L3)
3. form sentences using proper grammatical structures and correct word forms (L3)

**UNIT-II****10 Lectures****Lessons:**

1. **Around town** – from Cambridge Objective PET (Unit – 7)
2. **How do you feel** – from Cambridge Objective PET (Unit – 9)
3. **I look forward to hearing from you** – from Cambridge Objective PET (Unit – 10)

**Reading:** Identifying sequence of ideas; recognizing verbal techniques that help to link the ideas in a paragraph together.

**Writing:** Paragraph writing (specific topics) using suitable cohesive devices; mechanics of writing - punctuation, capital letters and Précis.

**Grammar:** Prepositions of place & movement, comparative adjectives, commands; Tenses –perfect & past simple; use of articles and zero article.

**Vocabulary:** Technical vocabulary from across technical branches (20 words), GRE Vocabulary Analogies (20 words) (Antonyms and Synonyms, Word applications) and confusables.

**Learning Outcomes:** At the end of the module, the student will be able to

1. understand the use of cohesive devices for better reading comprehension (L2)
2. write well structured paragraphs on specific topics (L3)
3. make necessary grammatical corrections in sentences & in short passages (L3)

**UNIT-III****12 Lectures****Lessons:**

1. **Risk!** – from Cambridge Objective PET (Unit – 15)
2. **Free time** – from Cambridge Objective PET (Unit – 16)
3. **Next week's episode** – from Cambridge Objective PET (Unit – 17)
4. **Shooting a film** - from Cambridge Objective PET (Unit – 18)

**Reading:** Reading a text in detail by making basic inferences - recognizing and interpreting specific context clues; strategies to use text clues for comprehension.

**Writing:** Summarizing - identifying main idea/s and rephrasing what is read; avoiding redundancies and repetitions and email.

**Grammar:** Tenses–forms of future tense and forms of past continuous, past perfect & past perfect continuous; subject-verb agreement; modal verbs and conjunctions.

**Vocabulary:** Technical vocabulary from across technical branches (20 words), GRE Vocabulary (20 words) (Antonyms and Synonyms, Word applications) Association, sequencing of words and idioms & phrases.

**Learning Outcomes:** At the end of the module, the student will be able to

1. infer meanings of unfamiliar words using contextual clues (L3)
2. write summaries based on global comprehension of reading/listening texts (L3)
3. form sentences using proper grammatical structures and correct word forms (L3)

## UNIT-IV

**10 Lectures**

**Lessons:**

1. **Happy families** – from Cambridge Objective PET (Unit – 19)
2. **Best friends?** – from Cambridge Objective PET (Unit – 23)
3. **I have got an idea** – from Cambridge Objective PET (Unit – 24)

**Reading:** Studying the use of graphic elements in texts to convey information, reveal trends/patterns/relationships, communicate processes or display complicated data.

**Writing:** Information transfer; describe, compare, contrast, identify significance/trends based on information provided in figures/charts/graphs/tables.

**Grammar:** Adjectives and adverbs; degrees of comparison; direct and indirect speech.

**Vocabulary:** Technical vocabulary from across technical branches (20 words) GRE Vocabulary (20 words) (Antonyms and Synonyms, Word applications), one-word substitutes.

**Learning Outcomes:** At the end of the module, the student will be able to

1. produce a coherent paragraph interpreting a figure/graph/chart/table (L4)
2. use language appropriate for description and interpretation of graphical elements (L4)
3. use correct forms of adjectives, adverbs, one-word substitutes and a range of reporting
4. verbs in speech and in writing (L3)

## UNIT-V

**10 Lectures**

**Lessons:**

1. **Shop till you drop** – from Cambridge Objective PET (Unit – 25)
2. **Travellers' tales** – from Cambridge Objective PET (Unit – 27)
3. **What would you do?** – from Cambridge Objective PET (Unit – 28)

**Reading:** Reading for comprehension - Intensive and Extensive reading techniques.

**Writing:** Writing well-structured essays and letters.

**Grammar:** Conditional sentences; editing short texts – identifying and correcting common errors in grammar and usage (articles, prepositions, tenses, subject-verb agreement)

**Vocabulary:** Technical vocabulary from across technical branches (20 words) GRE Vocabulary (20 words) (Antonyms and Synonyms, Word applications).

**Learning Outcomes:** At the end of the module, the student will be able to

1. produce well-organized essays and letters (L3)
2. edit short texts by correcting common errors (L4)
3. form sentences using proper grammatical structures and correct word forms (L3)

**Textbook:** Hashemi, Louise & Thomas, Barbara. Cambridge Objective PET – Student's Book 2<sup>nd</sup> Ed., Cambridge University Press, 2018.

## IT ESSENTIALS LAB

**Course Code:** 19CS1101

<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>0</b>	<b>0</b>	<b>3</b>	<b>1.5</b>

### Course Outcomes:

At the end of the Course the student shall be able to

**CO1:** demonstrate the installation of Operating Systems and troubleshooting.

**CO2:** apply basic LINUX commands to perform various operations.

**CO3:** make use of office tools in crafting word documents, spreadsheets and power point presentations using Microsoft office tools and LaTeX.

**CO4:** demonstrate the connection of the Local Area Network and access the Internet.

**CO5:** utilize Cloud based productivity enhancement and collaboration tools.

### Learning outcomes:

1. demonstrate assembling and troubleshooting of the computer (L2)
2. apply basic Linux commands to perform file processing and networking operations(L3)
3. make use of MS Office and Latex tools to create documents and presentations (L3)
4. inspect browser and LAN settings to access the network (L4)
5. utilize Cloud based collaborative tools to provide web based services (L3)

### List of Experiments:

1. Every student should identify the peripherals of a computer, components in a CPU and its functions. Draw the block diagram of the CPU along with the configuration of each peripheral and submit to your instructor. Every student should disassemble and assemble the PC back to working condition.
2. Every student should individually install operating system like Linux or MS windows on the personal computer. The system should be configured as a dual boot with both windows and Linux
3. Every student should individually install open source software like WEKA, Python, GitHub, Orange, etc on the personal computer.
4. Software Troubleshooting: Students have to be given a malfunctioning CPU due to system software problems. They should identify the problem and fix it to get the computer back to working condition.

5. Practice the following LINUX Commands  
Help commands: whatis, man, info. Filesystem: ls, mkdir, cd, chmod, rm, mv, bc, who, whoami, ps, du, df, cal, date. Filters and Text processing: echo, cat, rev, head, tail, nl, cut, cp, paste, wc, cmp, diff, tr, ln
6. Practice the following LINUX Commands  
File compression: tar, compress, uncompress, Miscellaneous: apt-get, vi editor. Networking Commands :ping, ssh, ifconfig, netstat, traceroute. Execute simple C program using the vi editor.
7. Create a simple document using LaTeX that consists of document structure, typesetting, tables.
8. Create a simple document using LaTeX that consists of figures, equations and references
9. Using MS word perform the following:  
Formatting Fonts in word, Drop Cap in word, Columns, Tables, Borders and Colors, Inserting Header and Footer, Newspaper columns, clipart, Drawing toolbar and Word Art, Formatting Images, Textboxes, Paragraphs, Hyper linking
10. Using MS Excel perform the following:  
Cell Referencing, Formulae in spreadsheet – average, standard deviation, Charts, Renaming and Inserting worksheets, Count function, Sorting, Conditional formatting.
11. Using MS Power Point perform the following:  
PPT Orientation, Slide Layouts, Auto Shapes, Lines and Arrows, Inserting Images, Tables and Charts.
12. Students should get connected to the Local Area Network to access the Internet and customize their web browsers with the LAN proxy settings, bookmarks, pop up blockers and plug-ins like Macromedia Flash.
13. Using collaboration tools of G-suite Domain perform the following  
Store, sync, and share files with ease in the cloud using **Google Drive**.  
Document creation and editing text documents in your web browser using **Google Docs**.  
Handle task lists, create project plans, analyze data with charts and filters using **Google Sheets**.  
Manage event registrations, create quizzes, and analyze responses using **Google Forms**.

**Additional Experiments:**

1. Setup and configure new virtual machine
2. Compile and run simple C programs in Linux environment using vi editor
3. Edit photos/images in various formats using photo editing tools
4. Keep track of important events, sharing one's schedule using Google Calendar

## ENGINEERING CHEMISTRY LAB

**Course Code: 19BC1102**

L	T	P	C
0	0	3	1.5

**Course outcomes:** At the end of the Course the student shall be able to

**CO1:** determinet he metal ions by titrimetry

**CO2:** determine the strength of acids, bases and water quality parameters

**CO3:** explain the functioning of the instruments such as pH meters, Conductometer and Potentiometer.

**CO4:** determine the physical properties like surface tension and viscosity

**CO5:**prepare polymeric resins and nanoparticles

### LIST OF EXPERIMENTS

1. Determination of Zinc by potassium Ferrocyanide.
2. Determination of Total hardness of a groundwater sample
3. Determination of copper in brass
4. Determination of active chlorine content in Bleaching powder
5. Determination of sodium carbonate and sodium bicarbonate in a mixture
6. Determination of chromium (VI) by hypo
7. Determination of sulphuric acid in lead-acid storage cell.
8. Determination of strength of an acid by pH metric method.
9. Determination of Fe(II) in Mohr's salt by potentiometric method.
10. Determination of citric acid in a citrus fruit by conductometric method.
11. Determination of viscosity of a liquid.
12. Determination of surface tension of a liquid.
13. Preparation of gold nanoparticles.
14. Construction of Galvanic cell.
15. Determination of Fe(III) by spectrophotometry.
16. Preparation of Nylon polymer.

Note: Any **TWELVE** of the above experiments to be conducted

**BASIC ELECTRICAL AND ELECTRONICS ENGINEERING LAB****Course Code: 19EE11D4****L T P C****0 0 3 1.5****Course Outcomes:** At the end of the Course the student shall be able to**CO1:** Analyze the DC Theorems**CO2:** Obtain the performance characteristics of DC machines and AC Machines**CO3:** Obtain the characteristics of Diode and LED**CO4:** Apply the devices such as Diode, MOSFET, OPAMP as a Rectifier, Amplifier and inverter Gate**CO5:** Simulate Diode, Transistor, MOSFET , OPAMP circuits using suitable software**List of Experiments:**

1. Verification of Kirchhoff's Laws.
2. Verification of Superposition Theorem.
3. Verification of Thevenin's Theorem.
4. Speed Control of DC shunt motor.
5. OC and SC Tests on a single phase transformer.
6. Brake Test on DC shunt motor.
7. Current Voltage Characteristics of a p-n Junction Diode/LED.
8. Diode Rectifier Circuit- Half wave rectifier
9. Diode Rectifier circuit- Full wave bridge rectifier
10. Voltage Regulation with Zener Diodes.
11. Observe output waveform of Inverting amplifier with Op-Amps
12. Observe output waveform of Non-inverting Amplifier with Op-amps.

**In addition to the above experiments, at least any one or two of the experiments from the following list are required to be performed**

13. Open Circuit characteristics of separately excited DC generator.
14. Design of a MOSFET amplifier.
15. Operate MOSFET as inverter/NOR gate.
16. Simulation experiments using PSPICE

(a) Diode and Transistor Circuit Analysis.

(b) MOSFET Amplifier design.

17. Inverting and Noninverting Amplifier Design with Op-amps.
18. Swinburn's test on DC Shunt Machine.

## COMMUNICATIVE ENGLISH LAB

**Course Code: 19HE1102**

<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>0</b>	<b>0</b>	<b>3</b>	<b>1.5</b>

**Course Outcomes:** At the end of the course, the student will be able to

- CO1:** summarize formal, semi-formal and informal speeches by native speakers
- CO2:** use appropriate dialogues in formal and informal contexts
- CO3:** demonstrate oral skills in group discussions and debates
- CO4:** use stress and intonation in connected speech in tune with IELTS, & TOEFL
- CO5:** demonstrate formal oral presentation and PPT skills

### List of Activities

1. **Listening for formal introductions/self introductions** –students should listen to videos on formal self introductions and learn to introduce themselves; they also practise grammar and vocabulary exercises on computers.
2. **Listening to TED talks and answering short questions** - Identifying the topic, the context and specific pieces of information by listening to short audio texts and answering a series of questions; they also practise grammar and vocabulary exercises on computers.
3. **Listening to inspiring speeches** - Answering a series of questions about main idea and supporting ideas after listening to audio texts; they also practise grammar and vocabulary exercises on computers.
4. **Role Play** – students need to imagine a situation, assume different roles and enact them in pairs.
5. **Group Discussions on specific topics** – students have to form into groups and learn about DOs and Don'ts of GD and discuss on specific topics.
6. **Introduction to the Sounds of English: Vowels** – students should listen to the vowel sounds on computers and familiar themselves with them.
7. **Introduction to the Sounds of English: Consonants** – students are required to listen to the consonant sounds on computers and familiar themselves with them.

8. **Narrating short stories** – students have to write a short story and narrate it individually or in pairs; they also practise grammar and vocabulary exercises on computers.
9. **Narrating one's experiences** - students should recall some unforgettable experiences individually or in pairs; they also practise grammar and vocabulary exercises on computers.
10. **Pronunciation: Word stress** – students have to listen to the videos by native and non-native speakers and articulate words following appropriate rules of word stress.
11. **Pronunciation: Sentence stress** - students listen to the videos by native and non-native speakers and articulate words following appropriate rules of sentence stress.
12. **Debates** – students participate in debates after watching model debates; they also practise grammar and vocabulary exercises on computers.
13. **Oral presentations** – students prepare for presentations on the lives of remarkable engineers and perform individually; they also practise grammar and vocabulary exercises on computers.
14. **PPT presentations** – students make Power Point Presentations and present them in teams
15. **Listening for rhythm** – students listen to speeches by native speakers, familiarize themselves with rhythm; they also practise grammar and vocabulary exercises on computers.
16. **Listening for intonation** - students listen to speeches by native speakers familiarize themselves with intonation; they also practise grammar and vocabulary exercises on computers.

## **II SEMESTER**

## PROBABILITY AND STATISTICS

**Course Code : 19BM1103**

<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>3</b>	<b>1</b>	<b>0</b>	<b>4</b>

### **Course Outcomes:**

At the end of the course, the student will be able to

**CO1:** determine the mean and variance of discrete and continuous random variables.

**CO2:** calculate probabilities using normal distribution and construct sampling distribution of means.

**CO3:** estimate the confidence interval for the mean of a population and test a hypothesis concerning means.

**CO4:** estimate the confidence intervals, test a hypothesis concerning variances and proportions.

**CO5:** calculate correlation coefficient and determine linear regression for bivariate data.

### **Unit I: Random Variables**

**10 Lectures**

Random variables, types of random variables, probability distribution function, probability density function, mean and variance of a random variable.

(Sections 4.1, 4.4, 5.1 of textbook)

#### **Learning Outcomes:**

At the end of this unit, the student will be able to

1. explain the notion of random variable, distribution functions (L2)
2. determine the mean and variance of a random variable (L3)
3. calculate probabilities using density and distribution function. (L3)

### **Unit II: Probability Distributions and Sampling Distributions**

**10 Lectures**

Normal distribution: calculating normal probabilities, normal approximation to the Binomial distribution. sampling distributions: population and sample, sampling distribution of the mean (known), sampling distribution of the mean (unknown).

(Sections 5.2, 5.3, 6.1, 6.2, 6.3 of textbook)

#### **Learning Outcomes:**

At the end of this unit, the student will be able to

1. interpret the properties of normal distribution and its applications (L2)
2. determine the mean and variance of the sampling distribution of means (L3)
3. discuss the probability distribution of sampling distribution of means (L2)

### **Unit III: Estimation and Test of Hypothesis of Means**

**10 Lectures**

Point estimation, interval estimation, introduction to test of hypothesis, hypothesis concerning one mean, hypothesis concerning two means, matched pair comparisons.

(Sections 7.1, 7.2, 7.4, 7.5, 7.6, 8.2, 8.3, 8.4 of textbook)

**Learning Outcomes:**

At the end of this unit, the student will be able to

1. calculate confidence intervals for the mean of a population (L3)
2. discuss the test of a hypothesis concerning population mean (L2)
3. apply test of hypothesis concerning two means (L3)

**Unit IV: Estimation, Test of Hypothesis of Variances and Proportions** **10 Lectures**

Estimation of variance, hypothesis concerning one variance, hypothesis concerning two variances, estimation of proportion, hypothesis concerning one proportion, hypothesis concerning several proportions.

(Sections 9.1- 9.3, 10.1 - 10.3 of textbook)

**Learning Outcomes:**

At the end of this unit, the student will be able to

1. calculate confidence intervals for variance and proportion of a population (L3)
2. discuss the test of a hypothesis concerning population variance(L2)
3. apply test of hypothesis concerning proportions (L3)

**Unit V: Regression analysis****10 Lectures**

The method of least squares, curvilinear regression, multiple regression, correlation (excluding causation).

(Sections 11.1, 11.3, 11.4, 11.6 of textbook)

**Learning Outcomes:**

At the end of this unit, the student will be able to

1. identify a regression curve for a data using principle of least squares (L1)
2. discuss the correlation coefficient for bivariate data (L2)
3. calculate regression coefficients using correlation coefficient and find regression lines (L3)

**Textbook:**

Richard A.Johnson, “*Miller & Freund’s Probability and Statistics for Engineers*”, 8th edition, PHI Learning India Private Limited, 2011.

**Reference Books:**

1. S. Ross, “*A First Course in Probability*”, Pearson Education India, 2002.
2. W. Feller, “*An Introduction to Probability Theory and its Applications*”, 1<sup>st</sup> edition, Wiley, 1968.
3. Gilbert Strang, “*Introduction to Linear Algebra*”, 5<sup>th</sup> edition, Wellesely- Cambridge Press, 2016.

## APPLIED PHYSICS

**Course Code: 19BP1101**

<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>

### Course Outcomes:

At the end of the Course the student shall be able to

**CO1:** realize the principles of optics in designing optical devices

**CO2:** convert the knowledge of basic principles of dielectrics magnetism to design electrical and storage devices

**CO3:** apply electromagnetic wave propagation in different guided media

**CO4:** calculate conductivity of semiconductors

**CO5:** interpret the difference between normal conductor and superconductor, demonstrate the application of nanomaterials

### UNIT-I: WAVE OPTICS

**10 Lectures**

Interference of light-Principle of Superposition-Interference in thin films (reflected light)- Newton's Rings-Applications of Interference-Determination of Wavelength, Diffraction-Fraunhofer Diffraction-Single slit Diffraction -Diffraction Grating – Grating Spectrum - Polarization-Polarization by reflection, refraction and double refraction-Nicol's Prism-Half wave and Quarter wave plate- applications of Polarization.

Text Book 1:Sec.:8.2, 8.8.1, 8.8.2, 8.11.(1 - 4), 8.12.(1, 4), 9.2, 9.3, 9.4, 9.5, 9.7, 9.8, 9.8.1, 10.2, 10.6.1, 10.6.1.1, 10.6.2, 10.6.5, 11.5, 11.9.1, 11.9.2, 10.10.(i, ii)

**Learning Outcomes:**At the end of unit the student will be able to

1. apply the phenomena of interference in anti reflection coatings and filters (L3)
2. analyze the differences between interference and diffraction (L4)
3. illustrate the concept of polarization of light and its applications (L2)
4. classify the production and detection of different polarized light (L4)

### UNIT-II: DIELECTRICS AND MAGNETICS

**10 Lectures**

Introduction to Dielectrics-Electric polarization-Dielectric polarizability, Susceptibility and Dielectric constant- Types of polarizations, mathematical derivation for electronic polarizability -Frequency dependence of polarization-Lorentz(internal) field- Claussius - Mossotti equation-Applications of Dielectrics, Introduction to Magnetism-Magnetic dipole moment-Magnetization-Magnetic susceptibility and permeability- Origin of permanent magnetic moment -Classification of Magnetic materials-Weiss theory of ferromagnetism (qualitative)-Hysteresis-soft and hard magnetic materials-Ferrites-Magnetic device applications (transformer core and hard disc).

Text Book 1: Sec : 40.1, 40.2, 40.4, 40.5, 40.9, 40.13, 40.13.1, 40.15, 40.17, 40.18, 40.21(i, ii), 41.1, 41.2, 41.4, 41.8.1, 41.14.1, 41.14.2, 41.12, 41.16 (i, iia) and Table 41.1

**Learning Outcomes:** At the end of unit the student will be able to

1. explain the concept of dielectric constant and polarization in dielectric materials (L2)
2. interpret Lorentz field and Claussius- Mosotti relation (L2)
3. classify the magnetic materials based on susceptibility and their temperature dependence (L2)
4. explain the applications of dielectric and magnetic materials (L2)

### **UNIT-III: ELECTROMAGNETIC WAVES & FIBER OPTICS** **10 Lectures**

Divergence and Curl of Electric and Magnetic Fields -Maxwell's Equations- Electromagnetic wave propagation in free space- Poynting's Theorem. Introduction to Optical Fibers-Total Internal Reflection-Propagation of electromagnetic waves through optical fiber-Critical angle of propagation-Acceptance angle -Numerical Aperture-Classification of fibers based on Refractive index profile, modes-importance of V number-Medical Application (endoscopy) -Fiber optic Sensors- Block Diagram of Fiber optic Communication and its advantages.

Text Book 2: Sec: 11.4, 11.5

Text Book 1: Sec:6.13, 6.14, 7.4, 7.7, 47.1, 47.2, 47.3, 47.4, 47.4.1, 47.4.2, 47.6, 47.10 (i, ii), 47.11 (1, 2, 3), 47.13, 47.19.1, 47.22.(1a, 2), 47.20, 47.21

**Learning Outcomes:** At the end of unit the student will be able to

1. apply the Gauss Theorem for divergence and Stokes Theorem for curl (L3)
2. assess the electromagnetic wave propagation in free space and its power (L3)
3. explain the working principle of optical fibers and its classification based on refractive index profile and mode of propagation (L2)
4. identify the applications of optical fibers in medical, communication and other fields (L2)

### **UNIT-IV: SEMICONDUCTORS** **10 Lectures**

Classification of solids based on energy bands – Intrinsic semiconductors –Electrical conductivity- derivation of density of charge carriers (electron) -Fermi energy - extrinsic semiconductors - N-type & P-type - Density of charge carriers (Qualitative)- Dependence of Fermi energy on temperature and carrier concentration -Hall effect- Hall coefficient - Applications of Hall effect - Applications of Semiconductor.

Text Book 1:Sec: 36.7, 36.8, 37.3, 37.7, 37.8.1, 37.11, 37.15, 37.16.2, 37.17.1, 37.23, 37.24, 37.28.(1 - 4), 37.28.13

**Learning Outcomes:**

The students will be able to

1. classify the energy bands of semiconductors (L2)
2. outline the properties of n-type and p-type semiconductors (L2)
3. identify the type of semiconductor using Hall effect (L2)
4. list the applications of semiconductors in electronic manufacturing (L2)

## UNIT-V: SUPERCONDUCTORS AND NANOMATERIALS

10 Lectures

Superconductors-Properties: Zero resistance, Critical temperature, Critical magnetic field, Critical current density, Meissner effect- Type-I and type-II Superconductors -BCS Theory- Josephson effect (AC & DC)-High T Superconductors- Applications of superconductors: transformers and electrical machines, magLev trains, SQUID.

Basics of Nanomaterials – Top-down and bottom-up approaches, Preparation (sol-gel & ball milling) – Carbon Nanotubes- Applications of Nano materials (better insulating materials, elimination of pollutants, high energy density batteries, nanomachines and nanodevices).

Text Book 1:Sec : 42.2, 42.4.1, 42.4.3, 42.4.4, 42.4.5, 42.4.6, 42.6, 42.7, 42.8, 42.10 (ii, vii, viii), 49.3, 49.5.1(iii), 49.5.2 (iv), 49.9, 49.17(ii, v, vii, xiv)

### Learning Outcomes:

The students will be able to

1. explain electrical resistivity of solids with temperature (L2)
2. classify superconductors based on Meissner effect (L2)
3. explain BCS theory, Josephson effect and high  $T_c$  materials (L2)
4. understand the basics and preparation methods of nanomaterials (L2)
5. identify the applications of nanomaterials in various fields (L3)

### Text Books:

1. M. N. Avadhanulu, P. G. Khirsagar, and T. V. S. Arun Murthy, *A textbook of Engineering Physics*, Revised edition (11e), S. Chand and Company Ltd., 2019.

## SWITCHING THEORY AND LOGIC DESIGN

**Course Code: 19EC11D1**

<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>

Course Outcomes: At the end of the course the student will be able to

**CO1:** describe the significance of number systems, conversions, binary codes

**CO2:** discuss different simplification methods for minimizing boolean functions

**CO3:** outline the concepts of various combinational circuits

**CO4:** illustrate the knowledge of sequential logic design, analyze the operation of flip-flops, registers and counters

**CO5:** classify Mealy & Moore models and Simplify & Design Sequential machines

### UNIT-I

**8 Lectures**

#### Number Systems and Codes

Introduction to number systems, representation of negative numbers, binary arithmetic, binary codes, Error detecting and correcting codes.

Learning outcomes: At the end of this unit, the student will be able to

1. understand the advantages of using different number systems. (L2)
2. describe the usefulness of different binary codes. (L2)
3. summarize the error detection and correction concepts. (L2)

### UNIT-II

**10 Lectures**

#### Boolean Algebra And Switching Function

Fundamental postulates of Boolean algebra, De-Morgan theorems, switching functions, Simplification of Boolean equations, Digital logic gates, properties of XOR gates, universal gates, NAND/NOR realizations. K-map method, Prime implicants, don't care combinations, Minimal SOP and POS forms, Tabular Method, Prime –Implicant chart, simplification rules.

**Learning outcomes:** At the end of this unit, the student will be able to

1. apply basic laws and De Morgan's theorems to simplify Boolean expressions. (L3)
2. understand concepts of sum-of-products and product-of-sums representations. (L2)
3. examine the efficiency of K- Map & Tabular methods of minimizing logic functions. (L3)

**UNIT-III****10 Lectures****Combinational Logic Design**

Adders, Subtractors, Multiplexer, De-Multiplexer, MUX Realization of switching functions, Encoder, Decoder, Parity bit generator, Code converters, Basic PLD's: ROM, PROM, PLA, PAL Realizations.

**Learning outcomes:** At the end of this unit, the student will be able to

1. apply Boolean algebra for describing combinational digital circuits (L3)
2. analyze standard combinational circuits such as adders, subtractors, comparators. (L4)
3. demonstrate the digital systems using PLDs (L3)

**UNIT-IV****12 Lectures****Sequential Circuits**

Latches, SR Flip-flops, JK Flip-flops, D Flip-flop, T-Flip-flop, Race around condition, Master-Slave Flip-flop, Shift Registers, Asynchronous and Synchronous Counters, Ring Counter, Jhonson Counter.

**Learning outcomes:** At the end of this unit, the student will be able to

1. understand the principle of Flip-Flops and Latches (L2)
2. summarize the concepts of Shift Registers. (L2)
3. demonstrate the Counters. (L3)

**UNIT-V****10 Lectures****Finite State Machines**

Analysis and Design of Synchronous Sequential Circuits: Moore and Mealy machine models, State Equations, State Table, State diagram, State reduction & assignment, Synthesis of synchronous sequential circuits- serial binary adder, sequence detector, and binary counter, Partition technique for completely specified sequential machines.

**Learning outcomes:** At the end of this unit, the student will be able to

1. understand Moore and Mealy machine models (L2)
2. outline the concepts of State assignment & Reduction (L4)
3. discuss the synthesis of synchronous sequential circuits (L4)

**Text Book:**

## PROBLEM SOLVING USING C

**Course Code: 19CT1101**

L	T	P	C
3	1	0	4

**Course Outcomes:** At the end of the course the student shall be able to

**CO1:** analyze the problem and choose appropriate algorithm to solve it.

**CO2:** design modular programs involving input output operations, decision making and looping constructs by choosing the appropriate data types for writing programs in C language.

**CO3:** apply the concept of arrays and string handling in problem solving.

**CO4:** apply the concept of pointers for dynamic memory management.

**CO5:** design programs to store data in structures and files.

### UNIT-I

**10 Lectures**

**PROBLEM SOLVING:** Introduction to computer based problem solving, Program design and implementation issues, Algorithms for problem solving: Simple problems based on number theory, Operations on ordered set of elements, Solving quadratic equations, Operations on matrices.

(Scope: Chapter 2 of text book 2)

**Learning Outcomes:** At the end of the module the student will be able to

1. identify the requirements to solve a problem (L2)
2. choose appropriate design to solve the problem (L3)
3. classify different programming environments (L2)
4. analyze and solve the problem with suitable algorithms (L4)

### UNIT-II

**10 Lectures**

**INTRODUCTION:** An Overview of C, Basic Data types, Modifying the Basic Data Types, Identifier Names, Variables, Type Qualifiers, Constants, Operators, Expressions, Selection, Iteration and Jump Statements.

**FUNCTIONS:** Designing Structured Programs, Functions Basics, Standard Library Functions, User Defined Functions, Categories of Functions, Parameter Passing Techniques, Scope, Scope Rules, Storage Classes and Type Qualifiers, Recursion: Recursive Functions, Preprocessor Directives.

**Learning Outcomes:** At the end of the module the student will be able to

1. choose appropriate conditional and unconditional control statements in solving a problem. (L3)
2. demonstrate modular programming approach. (L3)
3. understand the scope and lifetime of a variable. (L2)
4. understand the concepts of preprocessor directives. (L2)
5. demonstrate usage of recursive functions. (L3)

### UNIT-III

**10 Lectures**

**ARRAYS:** Concepts, Using Arrays in C, Inter-Function Communication using Arrays, Array Applications, Two-Dimensional Arrays, Introduction to Multidimensional Arrays.

**STRINGS** – Concepts, C Strings, String Input / Output Functions, Arrays of Strings, String Manipulation Functions.

**Learning Outcomes:** At the end of the module the student will be able to

1. apply the basic concepts of arrays in solving problems. (L3)
2. demonstrate programs of various operations on arrays. (L3)
3. demonstrate programs that mimics string functions in solving problems.(L3)

### UNIT-IV

**10 Lectures**

**POINTERS:** Introduction, Pointer Arithmetic, Pointers for Inter-Function Communication, Pointers to Pointers, Arrays and Pointers- Array of Pointers, Pointer to Array, Pointers to void, Pointers to Functions, Command Line Arguments. Dynamic Memory Allocation Functions, Programming Applications.

**Learning Outcomes:** At the end of the module the student will be able to

1. apply the concepts of pointers with respect to arrays and functions. (L3)
2. demonstrate programs that run through command line arguments. (L3)
3. demonstrate the usage of dynamic memory allocation functions to solve problems. (L3)

### UNIT-V

**10 Lectures**

**STRUCTURES, UNIONS AND ENUMERATED TYPES** - Type Definition (typedef), Enumerated Types. Structure: Definition and Initialization of Structures, Accessing Structures, Nested Structures, Arrays of Structures, Structures and Functions, Pointers to Structures, Self Referential Structures, Unions.

**FILES:** Introduction to Files, Modes of File operations, Text and Binary Files, file I/O Operations

**Learning Outcomes:** At the end of the module the student will be able to

1. demonstrate programs that use user defined data types to write programs. (L3)
2. demonstrate the usage of pre-defined file I/O functions to perform operations on files. (L3)
3. demonstrate programs that solve real time problems using structures. (L3)

## ENGINEERING GRAPHICS

**Course Code: 19ME1102**

L	T	P	C
1	0	3	2.5

### Course Outcomes:

At the end of the Course the student will be able to

**CO1:** illustrate various curves applied in engineering

**CO2:** show projections of lines and planes graphically.

**CO3:** show projections of solids and sections of solids graphically.

**CO4:** development of surfaces of regular solids using CAD packages.

**CO5:** use CAD packages to draw isometric and orthographic drawings.

### List of Experiments:

#### LIST OF EXERCISES IN MANUAL DRAWING:

Introduction to engineering graphics and their significance – Conventions in drawing, lettering and BIS conventions.

1. Construction of Conic sections including the rectangular hyperbola- general method only.
2. Cycloid, epicycloids, hypocycloid, involute of the circle.
3. Projections of points in any quadrant.
4. Projections of lines inclined to one plane.
5. Projections of lines inclined to both planes.
6. Projections of planes inclined to one plane.
7. Projections of planes inclined to both the planes.
8. Projections of solids inclined to one plane.
9. Section planes and sectional view of right regular solids- prism, cylinder, pyramid and cone

#### LIST OF EXERCISES IN COMPUTER AIDED DRAFTING (will be considered for internal evaluation only)

Introduction to AutoCAD: Basic drawing and editing commands, Dimensioning principles and conventional representations.

10. Development of surfaces of right regular solids-prism, cylinder, pyramid, cone and their sectional parts.
11. Orthographic Projections: Systems of projections, conventions and application to orthographic Projections.
12. Isometric Projections: Principles of isometric projection- Isometric scale; Isometric views: lines, planes, figures, simple and compound solids

**Text Books:**

1. N. D. Bhatt, *Engineering Drawing*, 53<sup>rd</sup> Edition, Charotar Publishers, 2016.
2. K. L. Narayana and P. Kanniah, *Engineering Drawing*, 3<sup>rd</sup> Edition, Scitech Publishers, Chennai, 2012.

**Reference Books:**

**APPLIED PHYSICS LAB****Course Code: 19BP1102**

L	T	P	C
0	0	3	1.5

**CO1:** interpolate some of the physical parameters based on optical phenomena

**CO2:** analyze the dielectric behaviour of a material

**CO3:** identify the characteristics of semiconducting materials

**CO4:** estimate the strength of magnetic field and assess the losses in magnetization

**CO5:** demonstrate the mechanical parameters using sensors

**List of Experiments**

1. Determination of wavelength of a source-Diffraction Grating-Minimum Deviation method
2. Newton's rings – Radius of Curvature of Plano - Convex Lens.
3. Determination of particle size of lycopodium powder using LASER diffraction.
4. Study of magnetic field along the axis of a current carrying coil – Stewart and Gee's apparatus.
5. Determination of Energy Band gap of a Semiconductor p - n junction.
6. Determination of wavelength of LASER by using grating.
7. Determination of dielectric constant by charging and discharging method.
8. Determination of resistivity of semiconductor by Four probe method.
9. Study the variation of B versus H by magnetizing the magnetic material ( B-H curve).
10. Determination of Strain variation using Strain Gauge sensor.
11. Hall effect
12. To determine the energy band of semiconductor by Four probe method.
13. To determine the energy gap of a semiconductor.
14. Measurement of resistance with varying temperature.

*Note: Any **TWELVE** of the above experiments to be conducted*

## BASIC ENGINEERING WORKSHOP

**Course Code: 19ME1101**

L	T	P	C
0	0	3	1.5

### Course Outcomes:

At the end of the Course the student will be able to

**CO1:** apply wood working skills in real world applications.

**CO2:** build different parts with metal sheets in real world applications.

**CO3:** apply fitting operations in various applications.

**CO4:** apply different types of basic electric circuit connections.

**CO5:** assemble and disassemble light engineering assemblies

### LIST OF EXPERIMENTS

#### Wood Working:

Familiarity with different types of woods and tools used in wood working and making of the following joints

1. Half – Lap joint
2. Mortise and Tenon joint
3. Corner Dovetail joint or Bridle joint

#### Sheet Metal Working:

Familiarity with different types of tools used in sheet metal working, Development of following sheet metal jobs from GI sheets and soldering of the joints

4. Tapered tray
5. Conical funnel
6. Elbow pipe

#### Fitting:

Familiarity with different types of tools used in fitting and making of the following fitting joints

7. V-fit
8. Dovetail fit
9. Semi-circular fit

**Electrical Wiring:**

Familiarity with different types of basic electrical circuits and make the following connections

10. Parallel and series
11. Two-way switch
12. Tube light
13. Residential house wiring using fuse, switch, indicator, lamp and energy meter

**Assembling/Disassembling Practice**

14. Bicycle
15. Flush tank
16. Wall clock

Note: Any **TWELVE** of the above experiments to be conducted

## PROBLEM SOLVING LAB USING C

**Course Code: 19CT1102**

L	T	P	C
0	0	3	1.5

### Course Outcomes:

At the end of the Course the student shall be able to:

**CO1:** Apply the concepts of variables, data types, operators and expressions.

**CO2:** Demonstrate the usage of Conditional and Unconditional statements.

**CO3:** Demonstrate the usage of functions and related functions with respect to arrays and strings.

**CO4:** Implement the concept of pointers and structures.

**CO5:** Demonstrate the usage of files and Command Line Arguments.

### List of Programs:

#### Week 1 (Basic Programs)

1. C program to display hello world message.
2. C program to scan all data type variables as input and print it as output.
3. C program to perform arithmetic operations like +, -, \*, /, % on two input variables.
4. C program to perform temperature conversions from Centigrade to Fahrenheit and vice versa.

#### Week 2 (Programs on Operators)

1. C program to scan an input and perform pre and post increment operation on it and display the result.
2. C program to perform all bit wise operations.
3. C program to extract the last two digits of a given integer n, where the number of digits should be greater than 2.
4. C program to display the greatest of three numbers using conditional operator.
5. C program to swap two numbers without using third variable.

#### Week 3 (Programs on Conditional Statements)

1. C program to check whether a given input integer is in between two values x and y.
2. C program to check whether a given character is a vowel or a consonant or a digit or a special symbol.
3. C program to display the nature and roots of a quadratic equation.
4. C program to perform arithmetic operations using switch statement.
5. C program to convert upper case character to lower case and vice versa.

#### Week 4 (Programs on Loop Statements)

1. C program to print odd numbers between specified ranges.
2. C program to display the factors of a given number and check whether it is a prime or not.

3. C program to display the sum of individual digits of a given integer raised to the power of n. Also check whether the given integer is Armstrong or not.
4. C Program to demonstrate the usage of unconditional control statements.
5. C program to display the following pattern.

```
5 4 3 2 1
4 3 2 1
3 2 1
2 1
1
```

### Week 5 (Programs on Functions)

1. C program to demonstrate the various categories of functions with respect to return type and number of arguments.
2. C program to find the LCM of two numbers using functions.
3. Create a header file which contains the following prototype:
  - i. `int factorial ( int ) ; // non-recursive function`
  - ii. `int factorial_rec(int); //Recursive function`
  - iii. `int prime ( int ) ;`Use the above functions in a C program by including the above header file.
4. C program to display Pascal's triangle using functions.

### Week 6 (Programs on Arrays)

1. C program to read n integer values into an array and display them
2. C program to count and display the number of positive, negative, even and odd numbers in a given array of integers and also display their sum.
3. C program to find the smallest and largest numbers in an array of integers.
4. C program to perform addition, multiplication, transpose of given matrices using functions.
5. C program to check whether a given integer exists in a list of numbers and print its index value if it is present, otherwise print "No".

### Week 7 (Programs on Strings)

1. C program to convert upper case character to lower case and vice versa in a given string.
2. C program to delete all vowels in a given string and display the remaining string.
3. C program to check whether a given string is palindrome or not.
4. C program that reads two integers as strings and display their sum.

### Week 8 (Programs on Strings)

1. C program to demonstrate the usage of at least 10 predefined string handling functions.
2. C program that implements the following user defined string handling functions
  - i. To find the length of the given string
  - ii. To copy the contents of one string to another

- iii. To reverse the contents of a string
- iv. To compare two strings
- v. To concatenate two strings

**Week 9 (Programs on Pointers and Dynamic Memory Allocation)**

- 1. C program to demonstrate the usage of pointers.
- 2. C program that uses dynamic memory allocation functions to add n elements and display their average.
- 3. C program that performs pointer arithmetic.
- 4. C program that implements call by reference.

**Week 10 (Programs on Pointers)**

- 1. C program to demonstrate the following
  - i. Pointers to Pointers
  - ii. Array of Pointers
  - iii. Pointer to Array
  - iv. Pointers to Functions

**Week 11 (Programs on Structures)**

- 1. C program to access and display the members of the structure.
- 2. C program that demonstrates different ways to access the structure elements using pointers.

**Week 12 (Programs on Files)**

- 1. C program to read the contents of a file and display on to output screen.
- 2. C program to copy the contents of one file to another.
- 3. C program to count and display the number of characters, words and lines in a file.
- 4. C program to print last n characters of a file by reading file name and n value from command line.

**Programs to be covered beyond syllabus:**

- 1. C program to find the factorial of a given number using recursive and non recursive functions.
- 2. C program to display the first n terms of the Fibonacci sequence.

Example: If n= 5 it has to print      0   1   1   2   3

- 3. Write a general-purpose function to convert any given year into its roman equivalent. The following table shows the roman equivalents of decimal numbers:

Decimal	Roman
1	I
5	V

10	X
50	L
100	C
500	D
1000	M

Example:

Roman equivalent of 1988 is MDCCCCLXXXVIII

Roman equivalent of 1525 is MDXXV

4. C program to display upper and lower triangles of a given matrix.
5. C program to add the sum of row wise elements, column wise elements and diagonal elements of a given square matrix and display the result.
6. C program to check whether the matrix is symmetric or not.
7. Given a positive integer ( $\leq 1000000$ ), find the minimum number of bits required to represent it as a binary number.
8. C program to perform left rotation of the array.
9. C program to implement binary search
10. C program to sort a given list of values using bubble sort.
11. C program to find the LCM of array of integers
12. C program to find the two's complement of a given binary input.
13. C program to replace all the vowels in a given string with a given character
14. C program to perform arithmetic operations using command line arguments
15. C program that writes the contents to a file and reads the contents from a file using structures.

## ENVIRONMENTAL SCIENCE

**Course Code: 19BC11Z1**

<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>3</b>	<b>0</b>	<b>0</b>	<b>0</b>

**Course Outcomes:** At the end of the Course the student shall be able to

**CO1:** gain a higher level of personal involvement and interest in understanding and solving environmental problems.

**CO2:** recognize the interconnectedness of human dependence on the various ecosystems

**CO3:** demonstrate knowledge relating to the biological systems involved in the major global environmental problems of the 21st century

**CO4:** influence the society in water management and environmental acts.

**CO5:** discuss the management of environmental hazards, disasters and sustainable development practices.

### **UNIT – I:**

**10 Lectures**

#### **MULTIDISCIPLINARY NATURE OF ENVIRONMENTAL STUDIES**

Definition, Scope and Importance – Need for Public Awareness.

**Natural resources :** Renewable and non-renewable resources – Natural resources and associated problems – Forest resources – Use and over – exploitation, deforestation, case studies – Timber extraction – Mining, dams and other effects on forest and tribal people – Water resources – Use and over utilization of surface and ground water – Floods, drought, conflicts over water, dams – benefits and problems – Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources, case studies – Food resources: World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture, fertilizer-pesticide problems, water logging, salinity, case studies. – Energy resources:

#### **Learning outcomes**

After the completion of the Unit, students will be able to

1. articulate the basic structure, functions, and processes of key social systems affecting the environment.(L2)
2. use of water resources (L3)
3. articulate basic understanding of the effects of modern agriculture on the environment.(L3)
4. explain how various paradigms or world views and their implicit and explicit assumptions and values shape the viewer's perception of environmental problems and solutions.(L2)

**UNIT – II:****10 Lectures****ECOSYSTEMS, BIODIVERSITY AND ITS CONSERVATION**

**Ecosystems:** Concept of an ecosystem. – Structure and function of an ecosystem – Producers, consumers and decomposers – Energy flow in the ecosystem – Ecological succession – Food chains, food webs and ecological pyramids – Introduction, types, characteristic features, structure and function of the following ecosystem:

- a. Forest ecosystem.
- b. Grassland ecosystem
- c. Desert ecosystem
- d. Aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries)

**Biodiversity and its conservation:** Definition: genetic, species and ecosystem diversity – Bio-geographical classification of India – Value of biodiversity: consumptive use, Productive use, social, ethical, aesthetic and option values – Biodiversity at global, National and local levels – India as a mega-diversity nation – Hot-spots of biodiversity – Threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts – Endangered and endemic species of India – Conservation of biodiversity: In-situ and Ex-situ conservation of biodiversity.

**Learning outcomes**

After the completion of the Unit, students will be able to

1. get a clear picture of the structure and functions of ecosystems.(L1)
2. explain why renewable and non-renewable energy resources are important.(L2)
3. get awareness about land degradation, soil erosion & desertification.(L2)
4. gain a rigorous foundation in various scientific disciplines as they apply to environmental science, such as ecology, evolutionary biology, hydrology, and human behavior.(L3)

**UNIT – III:****10 Lectures****ENVIRONMENTAL POLLUTION AND SOLID WASTE MANAGEMENT**

**Environmental pollution:** Definition, Cause, effects and control measures of :

- a. Air Pollution.
- b. Water pollution
- c. Soil pollution
- d. Marine pollution
- e. Noise pollution
- f. Thermal pollution
- g. Nuclear hazards

**Solid waste management:** Causes, effects and control measures of urban and industrial wastes – Role of an individual in prevention of pollution – Pollution case studies – Disaster management: floods, earthquake, cyclone and landslides.

**Learning outcomes**

After the completion of the Unit, students will be able to

1. demonstrate knowledge and understanding of theories in the field of Biodiversity and systematics in the broad sense.(L1)
2. conduct basic conservation biology research.(L2)
3. explain endangered and endemic species of India.(L2)
4. identify the threats to biodiversity (L2)

**UNIT – IV:****10 Lectures****SOCIAL ISSUES AND THE ENVIRONMENT**

**Social issues and the environment:** From Unsustainable to Sustainable development – Urban problems related to energy – Water conservation, rain water harvesting, watershed management – Resettlement and rehabilitation of people; its problems and concerns. Case studies – Environmental ethics: Issues and possible solutions – Climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust. Case Studies – Wasteland reclamation. – Consumerism and waste products. – Environment Protection Act. – Air (Prevention and Control of Pollution) Act. – Water (Prevention and control of Pollution) Act – Wildlife Protection Act – Forest Conservation Act – Issues involved in enforcement of environmental legislation – Public awareness.

**Learning outcomes:**

After the completion of the Unit, students will be able to

1. illustrate Cause, effects and control measures of air pollution.(L3)
2. describe soil, noise & water pollution.(L2)
3. explain the enforcement of Environmental legislation(L2)
4. demonstrate solid waste management.(L3)

**UNIT – V:****10 Lectures****HUMAN POPULATION AND THE ENVIRONMENT**

**Human population and the environment:** Population growth, variation among nations. Population explosion – Family Welfare Programmed. – Environment and human health – Human Rights – Value Education – HIV/AIDS – Women and Child Welfare – Role of information Technology in Environment and human health – Case studies.

**Field work:** Visit to a local area to document environmental assets River/forest grassland/hill/mountain – Visit to a local polluted site-Urban/Rural/Industrial/Agricultural Study of common plants, insects, and birds – river, hill slopes, etc..

**Learning outcomes**

After the completion of the Unit, students will be able to

1. Describe watershed management and environmental ethics.(L2)
2. explain the reasons for global warming(L2)
3. explain principles and impact of disasters on environment.(L2)

4. demonstrate disaster management cycle in India(L3)
